Summary

Full-Stack Developer with experience building web applications using Next.js, Node.js, Express.js, and PostgreSQL. Built AI-powered applications and enterprise workflow systems with a strong focus on backend development, REST APIs, authentication, and database design. Backend Intern at Maha Metro Rail Corporation.

Education

PCET's Pimpri Chinchwad University, Pune, India Aug 2023 – Present
B.Tech in Computer Science Engineering, CGPA: 7.45/10
Relevant coursework: Data Structures & Algorithms, Operating Systems, Computer Networks, Database Management Systems, Cybersecurity Fundamentals

Experience

Backend Intern, Maha Metro Rail Corporation, Pune, India May 2026 – June 2026

- Built REST API endpoints for internal enterprise modules in Node.js, enabling data exchange between 3+ backend services.
- Fixed database query and API response bugs, reducing error frequency across two frequently used internal workflows.
- Participated in code reviews and discussed backend implementation approaches with the development team.

Projects

AI Fitness Coach

[GitHub](#) | [Live](#)

Next.js, Node.js, Express.js, PostgreSQL, Prisma, Clerk, Gemini API

- AI Fitness Coach generates personalized workout and nutrition plans based on a user's goals, body metrics, and fitness level.
- Tracks workout schedules, calorie and protein intake, and progress over time, with plan suggestions generated through the Gemini API.
- Built REST APIs with Express and Prisma on top of PostgreSQL, with Clerk handling user sign-in and session management.

Imprest Management System

[GitHub](#) | [Live](#)

React.js, Node.js, Express.js, PostgreSQL, JWT

- Imprest Management System handles company expense requests and approvals with multi-level workflows and role-based access control for managers, finance staff, and employees.
- Built backend APIs and a workflow engine in Node.js and Express, with JWT authentication controlling access at each approval stage.
- Includes file uploads, audit logging, notification handling, and separate dashboards for managers, finance staff, and employees to track requests in real time.

Sarthi AI

[GitHub](#)

- Sarthi AI is a mental wellness web app that offers mood tracking and AI-driven conversational support for users seeking emotional guidance.
- Handles user authentication through Clerk, stores conversation history in PostgreSQL, and exposes REST endpoints for the frontend to consume.
- Backend built with Node.js and Express, using PostgreSQL for persistence and the Gemini API to generate contextual AI responses.

Technical Skills

Languages: Python, JavaScript (Node.js), Java

Backend: REST API Design, Express.js

Databases: PostgreSQL, MySQL, SQL

Cloud & DevOps: Git, GitHub, AWS, Docker

Frontend: React.js, Next.js

Tools: Postman

Concepts: Concurrent & Parallel Programming, Cybersecurity Fundamentals

Achievements

- Outstanding Creativity Award (2024) – won at PCET's Pimpri Chinchwad University project exhibition for a Smart Air Quality Monitoring System integrating sensor data with a real-time dashboard.
- AVINYA 3.0 Hackathon (2024) – built an AI-powered Interview Simulation Module at JSPM's RSCOE for mock interviews with real-time AI feedback, competing against 30+ teams.
